

### Work Instructions

Send scheduled or ad-hoc instructions to your field operators. Plan, assign, and track inspection rounds while collecting data offline, and then synchronise seamlessly once reconnected.

Available on Windows or Android, including rugged smartphones.

### **AI-Assisted Readings**

Experience next-level field operations with on-device AI that aids in equipment identification and tag and meter reading digitisation.

Benefit from double-verified readings: (1) the Al captures and digitises the information; then (2) the operator confirms the digitised reading for unparalleled accuracy.

## **AI-Assisted Quality Inspections**

Leverage custom-trained AI models for precise evaluation, counting, and measurement of product samples.

Ideal for diverse applications such as food quality checks and brand identification.

# Near Miss / Incident Reporting

Immediately report near-misses, unsafe equipment, hazards, and incidents, from all our mobile applications.

These reports are escalated immediately, and managers need to follow root cause analysis processes to address the concern.

### Shift Handover Reports

Real-time alerts and comprehensive reports ensure seamless shift handovers.

Our central system collates critical events during shifts, providing an invaluable audit log for future analysis, review, and training.
